

**BILL SUMMARY**  
2<sup>nd</sup> Session of the 55<sup>th</sup> Legislature

<b>Bill No.:</b>	<b>HB 3142</b>
<b>Version:</b>	<b>Introduced</b>
<b>Request Number:</b>	<b>7718</b>
<b>Author:</b>	<b>Representative Cockroft</b>
<b>Date:</b>	<b>2/17/2016</b>
<b>Impact:</b>	<b>OMES: Minimum \$100,000</b>
	<b>Maximum \$2,500,000,</b>
	<b>Depending on Implementation Dates</b>

**Research Analysis**

The measure creates the Oklahoma State Government Open Records One-Stop Initiative which would direct the Chief Information Officer (CIO) to develop and maintain an online webpage at OpenRecords.ok.gov. The site would allow the public to file a request for documents pursuant to the terms of the Oklahoma Open Records Act. The measure directs the CIO to retrieve and deliver the documents to the requester in electronic format. The measure then directs that the documents be made available to the public through data.ok.gov.

**Fiscal Analysis**

The Office of Management and Enterprise Services (OMES) has a number of projects in varying stages of development related to the provisions of HB 3142, including systems for identity management (user registration, verification, and account security), workflow management (building automated document workflows, or capturing submitted open records requests and routing to the appropriate agency then back to the requestor), eDiscovery (document discovery and archiving for legal purposes, most commonly used for OpenRecords processes), and web application development (the web portal in which requests can be made). Costs related to this measure mainly derive from the timeline for implementation (November 1, 2016), with the exception of \$100,000 for the web portal development, as OMES interprets the measure to require accelerated application development, which would require the agency to engage private contractors for staff augmentation. With an extended timelines, such augmentation would not be necessary. However, the measure does not appear to require full functionality by the effective date, which would reduce the costs associated with accelerated implementation.
