

Fiscal Impact
2nd Session of the 57th Legislature

Bill No.:

SB 1794

Version:

INT

Author:

Sen. Dahm

Date:

02/14/2022

Fiscal Analysis

SB 1794 would require a DEQ study of the feasibility of the establishment of nuclear power facilities in Oklahoma. Such a study is beyond the capacity of the DEQ Radiation Management Program on its own and would likely involve the assistance of either a consulting firm or a research university, or both. Depending on the breadth and depth of the scope of work, DEQ estimates such contracted assistance could cost \$50,000.00 to \$100,000.00. Even with contracted assistance, DEQ estimates the study would also require substantial time and effort by one or two DEQ Radiation Program staff members during the proposed 15-month period of the study.

FY'23 Impact: Est. of \$50,000.00-\$100,000.00

Full Year Impact: Est. of \$50,000.00-\$100,000.00
