

BILL SUMMARY
1st Session of the 60th Legislature

Bill No.:	HB1389
Version:	CS
Request Number:	13181
Author:	Rep. Provenzano
Date:	3/6/2025
Impact:	\$0

Research Analysis

The committee substitute for HB 1389 includes contrast-enhanced mammogram and molecular breast imaging to the definition of "diagnostic examination for breast cancer." The measure also adds a definition of supplemental examinations as related to an examination of the breast that is used to screen for breast cancer where there is no abnormality seen or suspected and it is based on personal or family medical history or additional factors. The measure also adds that all health benefit plans include coverage for supplemental examinations for breast cancer.

Prepared By: Suzie Nahach, House Research Staff

Fiscal Analysis

HB 1389 requires health benefit plans to include coverage for contrast-enhanced mammograms and molecular breast imaging as part of diagnostic and supplemental examinations for breast cancer.

The Oklahoma Health Care Authority (OHCA) does not anticipate the measure impacting Medicaid costs or the state HealthChoice plan, thus having no direct impact on the state budget.

Prepared By: Alexandra Ladner, House Fiscal Staff

Other Considerations

None.
